Found bugs or issues :
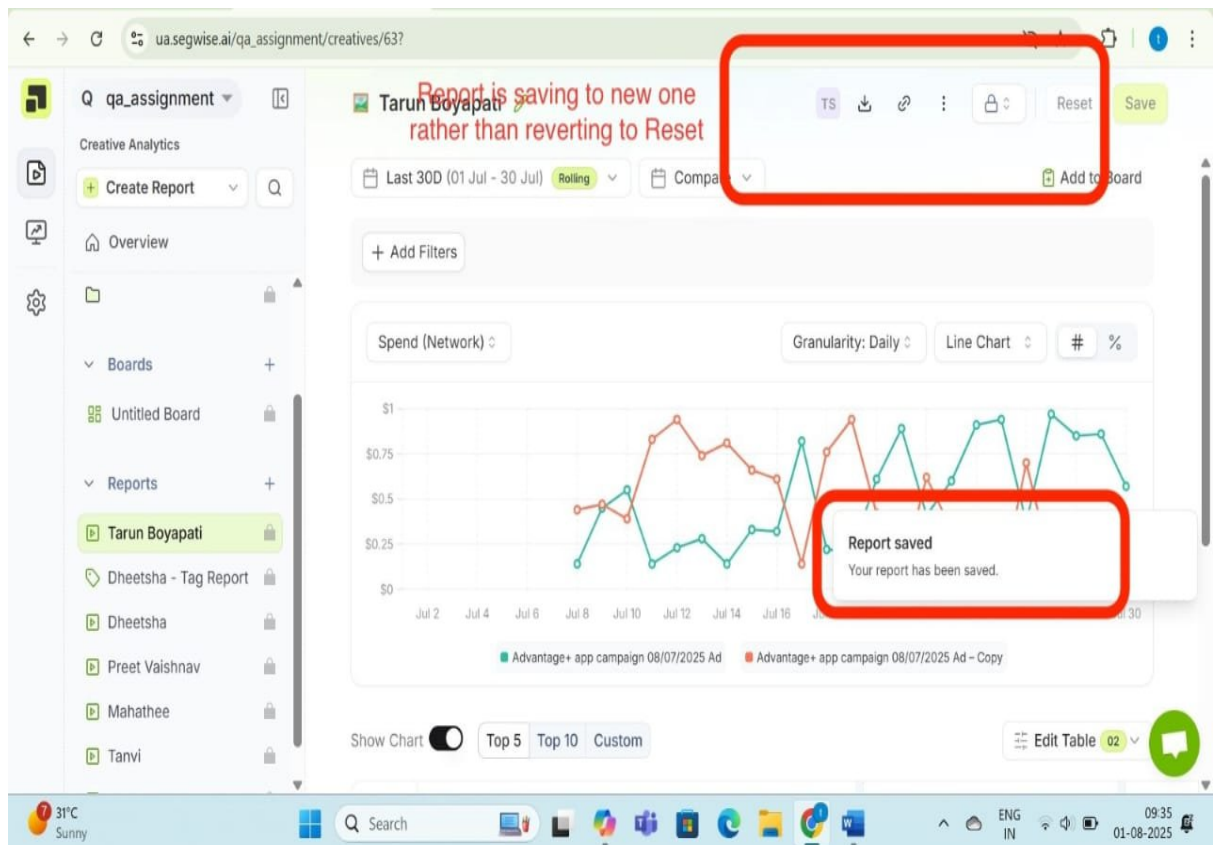

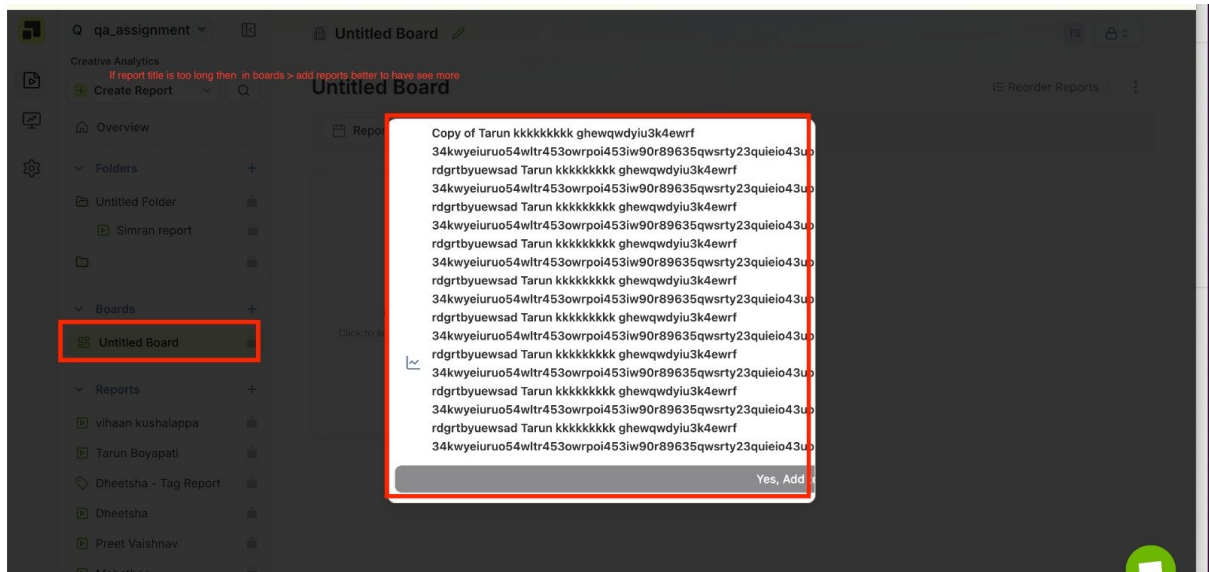

1. **Clicking the "Reset" button in the report actually saves the report instead of resetting it.**

2. **When a large number of characters are entered in the report name, the UI breaks—the text overflows into the chat and table sections.**

3.The logout option is missing or not displayed in the user interface.

Test cases :

1. **Valid Login Test**
   Input correct email and password , User should login successfully.

2. **Manual Navigation to Dashboard**
   Login with valid credentials. If not redirected, manually visit the dashboard URL , Dashboard should load properly.

3. **Open Report Creation Dialog**
   Click the "+" icon next to the Reports section,Report creation dialog should open.

4. **Double-Click "Create Report" Quickly**
   Open the report creation dialog and double-click the "Create" button quickly , Only one report should be created.

5. **Duplicate Report Name**
   Create a report using an existing name ,Should either be allowed or blocked with a validation message.

6. **Delete Report**
   Click the delete/trash icon on a report and confirm deletion , Report should be removed from the list.

7. **Create Report with Special Characters**
   Use special characters like @ in the report name and create the report,App should either accept it or show a validation warning.

8. **Use Back Button from Report View**
   Open a report, then click the browser's back button,Application should handle navigation gracefully.

9. **Access Dashboard Without Login**
   Try visiting the dashboard URL directly in a new or incognito browser session without logging in , User should be redirected to the login page.

10. **Session Persistence via Cookies**

After logging in, close and reopen the page , User should remain logged in due to stored cookies.

Suggestions :

1. **Duplicate Report Handling**
   The system currently allows creating multiple reports with the same name. There should be a validation or warning to avoid duplicates.

2. **User Attribution for Reports**
   Each report should indicate its creator—for example, by showing "Created by me" next to reports made by the logged-in user.

3. **Sidebar Expansion Issue**
   The sidebar is not expanding or sliding to the right when interacted with. This affects usability on smaller or dynamic layouts.
